GLOSSARY OF TERMS

01. TOP SHEET

Protective graphic layer provides durability, UV protection & great looks.

02. FIBER GLASS

Various combination of fiberglass weaves give each LF model its unique feel, strength, and flex.

03. PAULOWNIA WOOD CORE

Lightweight sustainable paulownia wood provides the right core for the unique feel and lively response and rebound in all LF park boards.

04. LIQUID RAIL

This elastomeric sidewall provides additional flex, rail bond, and durability.

05. SINTERED GRIND BASE

LF uses the most durable sintered Grind base material for extended life for park session after session.

06. C4 QUAD CARBON STRIPS

Multi-strand carbon tape provides the strongest, lightest and liveliest reinforcement to our AeroCore™ models.

07. DIVINYCELL CORE

Lightweight high compressive strength foam is CNC milled to create the heart of all LF AeroCores™.

08. DURA BASE

A durable protective graphic layer made from different materials depending upon the hull shape of the the board and where it is ridden.

09. PRECISION CAST PU CORE

Molded polyurethane foam creates the center of our standard performance boat boards.

10. NEXUS BASE

Lightweight graphic fabric layer for crisp hull contours and molded-in fins.

11. FIBER GLASS RETENTION STRIP

Glass layer for insert and FlexTrack™ retention and flex control between feet.

12. ENGINEERED GLASS LAYER

FlexTrack™ reinforcement.

13. DAMPENING LAYER

Reinforcement layer for insert retention and flex control between feet.

14. FLEXTRACK™

Glass reinforced FlexTrack™ flexes and twists as you ride, and allows for customizable stance choice.

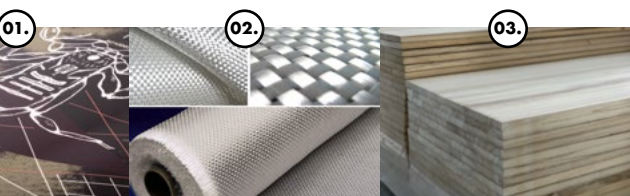

15. 4 UP FLEX BAR INSERTS

Longer flexible inserts bars offer improved 4 position stance options.

16. BIO RES

Our new Bio Resin uses Green Chemistry and renewable raw materials to reduce the environmental impact of production

CONSTRUCTION AND MAKE UP

CORE CONFIGURATION

CNC CORE

Precision CNC'd to give you the most optimized mixture of strength, flex, rebound, and control.

"SPLIT" CORE

An enhanced profiled core with sharper channels to add more control.

PROFILED CORE

Profiled thickness taper to optimize flex between the feet and in the tips for every rider's size, weight, and use.

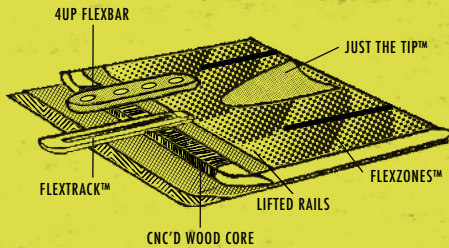

PRECISION CAST PU CORE

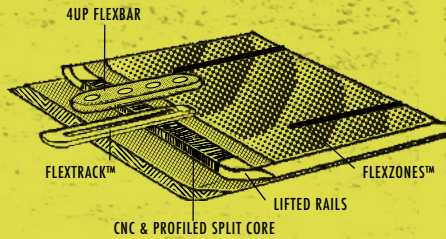

Perfectly sized polyurethane core to optimize the strength to weight ratio of the lamination.

PARK BOARD CONSTRUCTION

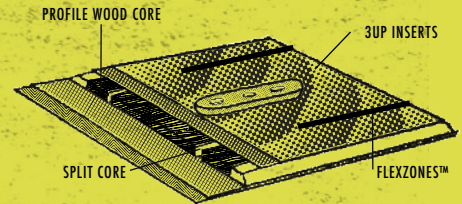

ATOMIC

DURA-FLEX

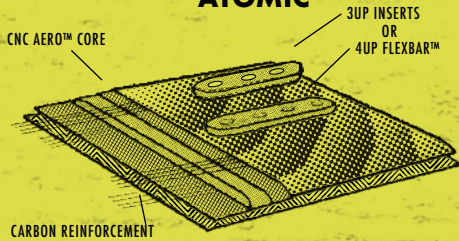

BREAKTHROUGH

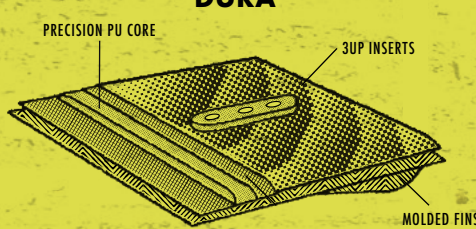

BOAT BOARD CONSTRUCTION

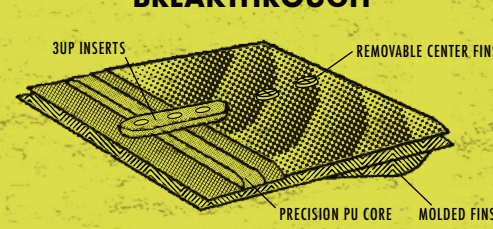

ATOMIC

DURA

BREAKTHROUGH

ROCKER TECH

THREE STAGE

Flatter center curve for speed & rail control. Exaggerated exit angle through tip gives a bucking pop off the wake.

CONTINUOUS

Flowing transitions into turns and long trajectory arc off the wake.

HYBRID

Blends two curves together for improved performance and consistent feel through the smooth center curve.

FLEX ZONE CHARACTERISTICS

LINEAR AXIS FLEX

Liquid Rail strategically placed longitudinally in the tips to give the board an independent flex from center to rail.

DUAL AXIS FLEX

Adding a horizontal element across the Flex zone to give maximum press ability to the tips.

MULTIPLE AXIS FLEX

A third axis of flex giving the rider the most vibrant torsional response and rebound. Along with having the same feeling as the 2D Flex, the 3D flex gives a more connected feel to the rider to where you can feel the flex through your feet and out to the tips and tails.

ILLUSION

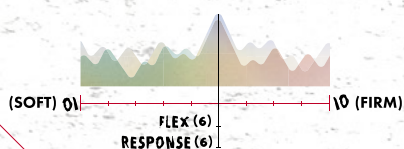

142 | 147 | 152

ATOMIC SERIES

FLEXTRACK™ | HYBRID CONTINUOUS ROCKER | WOOD CORE
GRIND BASE | LIQUID RAILS | BIO-RESIN

Top end confidence inspiring tech! Just the tip . . .

If you want to get creative on the water and rip your local park with ease, look no further, the illusion destroys all. Just the tip technology keeps swing weight low and response time high while the lifted catch free rails mean hang ups are a thing of the past, no illusion, it's a catch free weapon.

SPECIAL SAUCE
THE SPECIAL SAUCE
SPECIAL SAUCE
SPECIAL SAUCE

SINGLE CONCAVE RADIUS HULL

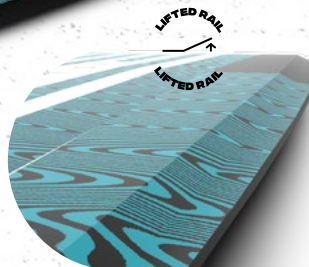

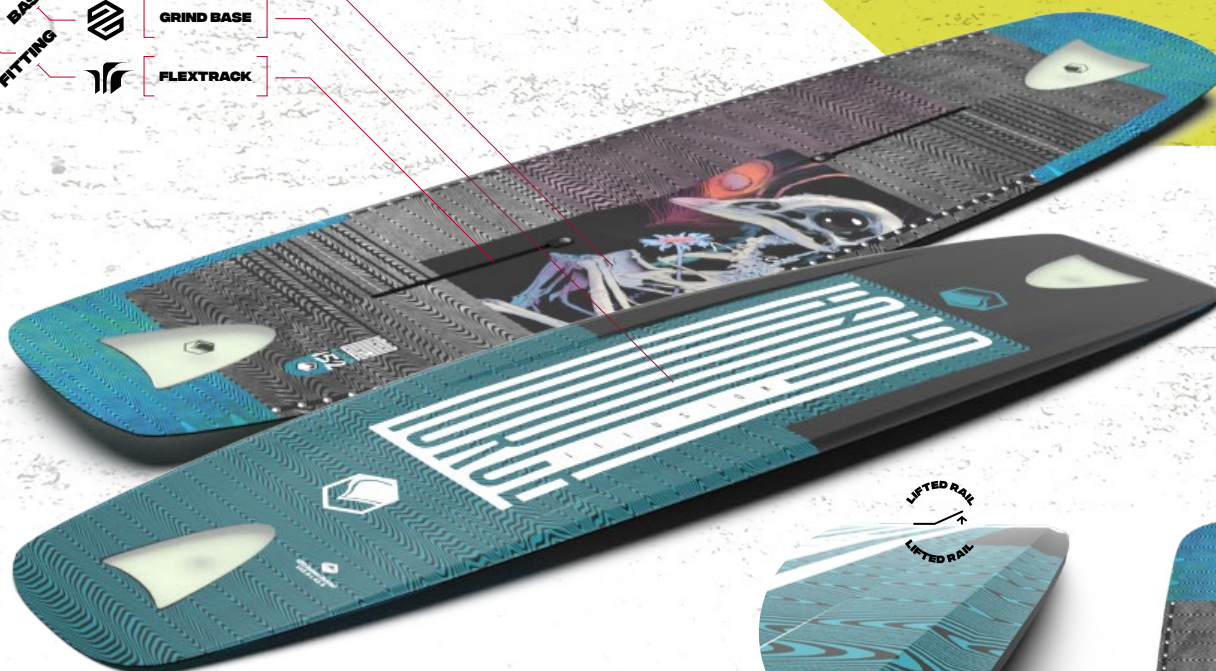

The hull in this board offers a single concave that adjusts throughout the length of the board giving it a sharp hold when you need it on the cable but no hangups on the features. It showcases sharpened edge channels through the tips for a sure hold.

LIFTED RAILS

The bottom was designed with what we call a lifted rail integration. This gives the bottom of the board a slight raised profile at the edges of the board to aid in a catch-free ride over rails and other obstacles.

JUST THE TIPS: ZERO CORE

Just at the tip, we removed parts of the core to reduce weight & improve overall response. The minimal weight at the tips now allow for drastically improved control while in the air as the swing weight has been reduced. What you see in the windows are the top sheet materials sandwiched together with fiberglass.

ATOMIC SERIES

FLEXTRACK™ | AGGRESSIVE CONTINUOUS ROCKER | WOOD CORE
GRIND BASE | LIQUID RAILS | BIO-RESIN

Love to charge the park? This is the edge to edge response master, its Guenther's board for a reason . . .

Guenther Oka rides to his own rhythm and it is a fast, explosive ride! His board is no different being our fastest edge to edge response board in the line with added flex tip technology to press till your heart is content. See what lines you can link up in the park, ride your own Rhythm.

SPECIAL SAUCE
THE SPECIAL SAUCE
SPECIAL SAUCE
SPECIAL SAUCE

SINGLE CONCAVED RADIUS HULL

The variable radius single concave bottom produces less drag while you are up on your feet and riding. The variable radius makes it extra playful on the tips on the water and on features. It allows for soft landings and a more comfortable ride.

LINEAR AXIS FLEX

The Rhythm is equipped with what we like to call, Linear Axis Flex. Liquid Rail strategically placed longitudinally in the tips to give the board an independent flex from center to rail. This makes it easier to initiate a turn and have a snappy response coming out of it, while the edge is able to grab and hold its track more.

DIAMOND SQUARE TAIL W/ INVERTED ENDS

The balance of release and smoothness depends on how rounded the corners are. This diamond tail blend and inverted sidecuts offer more control while maintaining area..

SPECIAL SAUCE
THE SPECIAL SAUCE
SPECIAL SAUCE
SPECIAL SAUCE

CONCAVED BEVELED RAILS

Concave beveled rails provide a softer, more forgiving rail towards the mid-section of the board. This feature helps prevent hang-ups on features and allows for more mellow transitions on the water.

CENTER CONCAVE WITH EDGE & TIP CHANNELS

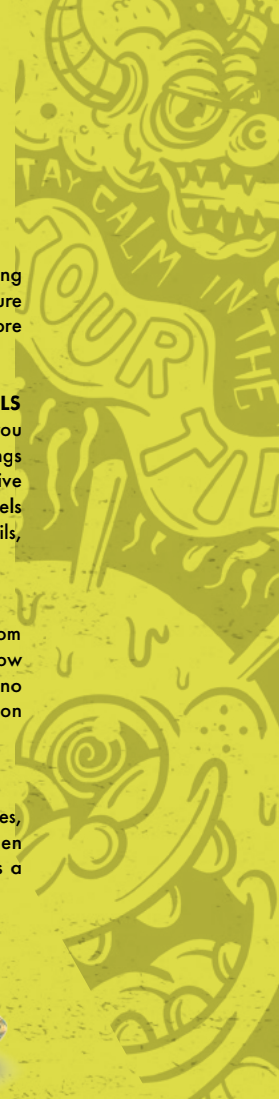

The single concave bottom produces less drag while you are up on your feet and riding. It allows for soft landings and a more comfortable ride. The Edge Channels give you that bite for controlled carves and the tip channels let you keep it on lock all the way into the kickers, rails, and corners for extra boost!

FINLESS

By engineering just enough tip channels on the bottom of the board, this gave the Tao enough bite to allow maneuverability at the park without any hangups on features. Thus allowing this board to remain finless on the water.

FULL ROUNDED SCALOPTAIL SHAPE

The round scalloptail is great for big drawn out carves, confident control and for keeping your speed when pulling out to the features. It's full shape also gives a softer landing off kickers and features.

134 | 138 | 142

ATOMIC SERIES

3-UP INSERTS | AGGRESSIVE 3-STAGE ROCKER | AERO CORE
DURA BASE | BIO-RESIN | C4 CARBON VEINS

If hard charging, high flying action is what you're looking for, the Remedy AERO is built for you...

The Remedy Aero is Harley's pro model board in a super lightweight package weighing just 5.35lbs! Harley charges hard and his board is built to match with aggressive 3 stage rocker, cnc'd aero core and C4 carbon reinforced top and base. Add in the triple concave with edge channels and venturi quad channels and this thing absolutely rips!

SPECIAL SAUCE
THE SPECIAL SAUCE
SPECIAL SAUCE
SPECIAL SAUCE

LIGHTWEIGHT AERO CORE™

An open cell divinicyl core that gives the board new life and weighing in at just over 5lbs!

TRIPLE CONCAVE W/ V-TIP CHANNELS & VENTURI

The triple concave bottom produces lift while you are up on your feet and riding. It will also help with control and maneuverability. The edge channels give you that bite for controlled carves. The bottom of the board was designed to disperse water like a V splitting the flow of water for a faster ride and release off the water.

C4 CARBON VEINS

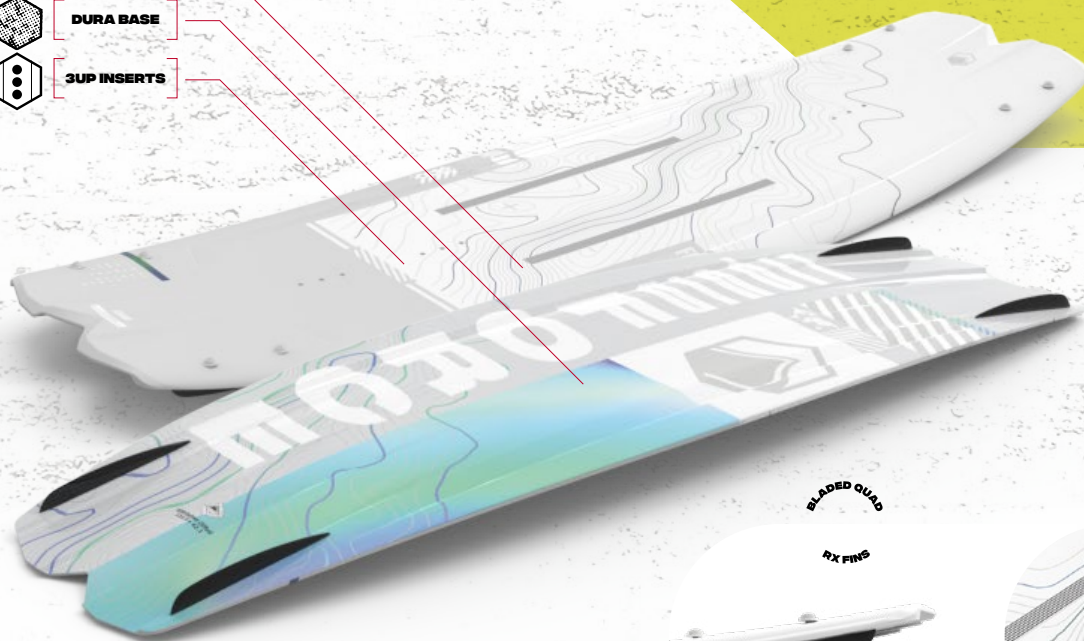

Two 1" wide carbon veins run tip to tail through the board on the top and base. This adds strenght and rigidity to the board without adding weight.

BLADED QUAD RX FINs

For maximum performance, you want to have maximum control of your board. The bladed quad RX fins are designed for a sure hold whether you are cutting in for speed or relying on a predictable landing from big air.

THIN LOW VOLUME RAILS

The volume and configuration of rails facilitate control, maneuverability, power, and speed. Thin low volume rails give quick edge to edge transitions and more bite off the wake.

ATOMIC SERIES

4-UP FLEXBAR™ | PROGRESSIVE 3-STAGE ROCKER | WOOD CORE
DURA BASE | LIQUID RAILS | BIO-RESIN

With a lower profile and extra core strength, the Rhyme is loose and fast to cut through chop and fly up any monster wake...

As one of the top wakeboarders on the scene, Guenther needed a board that can keep up with him! The Rhyme has tons of board feel and rebound, with minimal drag. It's 3-Stage Rocker helps you boost off the steepest wakes and the Paulownia wood core does the rest. The Rhyme is our liveliest boat board, hands down.

SPECIAL SAUCE
THE SPECIAL SAUCE
SPECIAL SAUCE
SPECIAL SAUCE

CNC'D WOOD CORE

Made out of sustainable Paulownia wood, this wood core gives unmatched rebound and lively flex. Paulownia wood is a proven sustainable wood that also grows back at quick rates.

LINEAR FLEXZONE TIPS AND QUAD CHANNEL FINS

Liquid Rail strategically placed longitudinally in the tips to give the board an independent flex from center to rail. This makes it easier to initiate a turn and have a snappy response coming out of it, while the edge is able to grab and hold its track more while working with the quad channel fins.

CONCAVED BEVELED RAILS

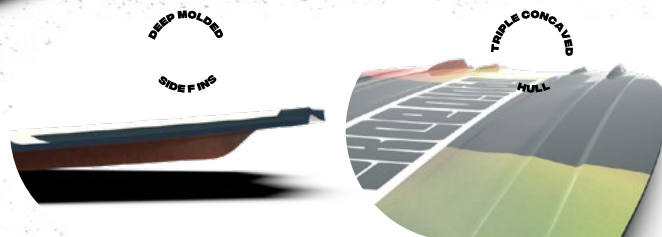

Concave beveled rails provide a softer, more forgiving rail towards the mid-section of the board. This feature helps prevent hang-ups on features and allows for more mellow transitions on the water.

DEEP MOLDED-IN QUAD FINS

The molded-in deep quad fins were designed with maximum hold but maintaining minimal drag.

TRIPLE CONCAVE HULL W/ EDGE CHANNELS

The triple concave bottom produces lift while you are up on your feet and riding. It will also help with control and maneuverability. The edge channels give you that bite for controlled carves.

SPECIAL SAUCE

PRECISION PU CORE

Molded polyurethane foam provides the ultimate center of our standard performance boat boards. Built with lightweight durability in mind for the everyday user.

D-I-S-C HULL WITH SLIGHT V

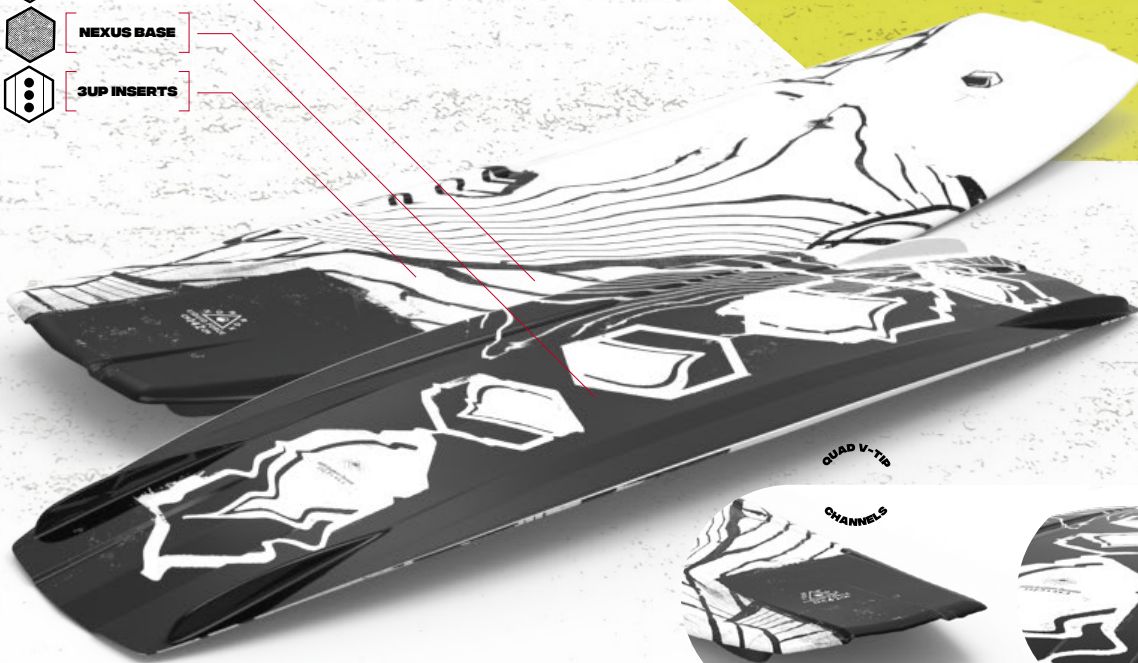

The double concave inside a single concave is designed to be fast and "skatey" all over the water. It forces the water beneath the board to be dispersed in a way that allows effortless movements and easy transitions. The slight V gives the water that extra direction of flow for extra performance.

QUAD V TIP CHANNELS

The bottom of the board was designed to disperse water like a V splitting the flow of water for a faster ride and release off the water.

MOLDED-IN FINs

The molded-in deep quad fins were designed with maximum hold but maintaining minimal drag.

BREAKTHROUGH SERIES

3-UP INSERTS | PROGRESSIVE 3-STAGE ROCKER | PU CORE
DURA BASE | BIO-RESIN

Meagan's pro model powerhouse offers some user friendly features to help figure out those first time tricks!

The M.E. features quad molded-in fins which are deep enough for extra hold when needed, but still allow for a loose, fun ride. Its Progressive 3-Stage Rocker gives you all the pop you are looking for, while the single to double concave center softens the landings for when you really send it!! This a great board for any lady that wants to progress her boat riding forward, and rip like Meagan Ethell!

TRIP

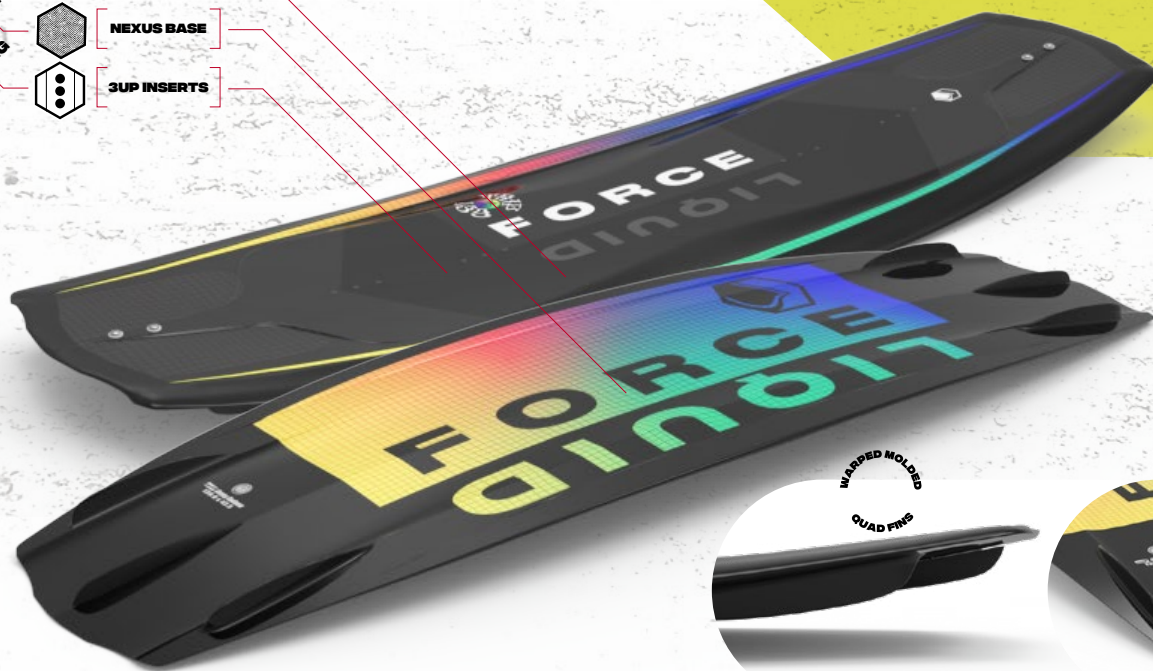

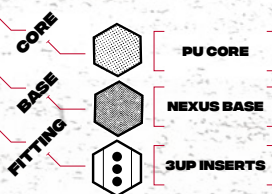

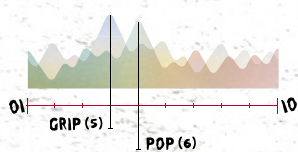

130 | 135 | 139 | 144 | 150

BREAKTHROUGH SERIES

3-UP INSERTS | AGGRESSIVE CONTINUOUS ROCKER | PU CORE
DURA BASE | BIO-RESIN

The OG! An absolute ripper of a board guaranteed to put a smile on your face!

The Trip has a fuller tip and tail shape for more pop than ever before. The D-I-S-C hull has longer molded-in fins that improves control and make transitioning from novice to advanced easier when removing the center fin. Added rocker makes the Trip perform better on today's bigger wakes. For '23 we added a 150 for the bigger guys out there. Take a set on one and you'll see why we've been Trippin' for all these years.
